Department of Computer Science \& Engineering Assignment

## Subject: Automata Theory \& Computability

 Subject Code: 18CS54Sem: V

## ASSIGNMENT QUESTION

## Module 1 <br> Why Study theory of computation, Language and String

1. Obtain DFAs to accept strings of a's and b's having exactly one a.
2. Obtain a DFA to accept strings of a's and b's having even number of a's and b's.
3. Give Applications of Finite Automata.
4. Write Regular expression for the following $L=\left\{a^{n}{ }^{m}{ }^{m}: m, n\right.$ are even $\} L=\left\{a^{n},{ }^{m}{ }^{m}\right.$ : $m>=2, n>=2\}$.
5. 

| $\delta$ |  | $a$ | $b$ |
| :---: | :---: | :---: | :---: |
| $p$ | $\{r\}$ | $\{q\}$ | $\{p, r\}$ |
| $q$ | $I$ | $\{p\}$ | $I$ |
| ${ }^{\mathrm{p}} \mathrm{r}$ | $\{\mathrm{p}, \mathrm{q}\}$ | $\{\mathrm{r}\}$ | $\{\mathrm{p}\}$ |

Convert above automaton to a DFA.
6. Convert following NFA to DFA using subset construction method.

| $\delta \mathrm{N}$ | 0 | 1 |
| :---: | :---: | :---: |
| p | $\{\mathrm{p}, \mathrm{r}\}$ | $\{\mathrm{q}\}$ |
| q | $\{\mathrm{r}, \mathrm{s}\}$ | $\{\mathrm{p}\}$ |
| $*_{r}$ | $\{\mathrm{p}, \mathrm{s}\}$ | $\{\mathrm{r}\}$ |
| $*_{\mathrm{s}}$ | $\{\mathrm{q}, \mathrm{r}\}$ | I |

7. Convert the following DFA to Regular Expression

## Module 2

Regular Expressions and Languages

1. P.T. Let $R$ be a regular expression. Then there exists a finite automaton $M=(Q, 1, G$, $q 0, A)$ which accepts $L(R)$.
2. Define derivation, types of derivation, Derivation tree \& ambiguous grammar. Give example for each.
3. Obtainan NFA to accept the following language $\mathrm{L}=\{\mathrm{w} \mid \mathrm{w}$ $a b a b^{\mathrm{n}}$ or aba ${ }^{\mathrm{n}}$ where nt 0$\}$
4. Convert the following NFA to its equivalent DFA(10m)( Dec- Jan 2011) (Jun-Jul 12)

5. Define grammar? Explain Chomsky Hierarchy? Give an example (6m)(June- July 2011)
6. Is the following grammar ambiguous

S -> aB | bA
A -> aS |bAA |a
B -> bS $|\mathrm{aBB}| \mathrm{b}$

## Module 3 <br> CFG

1. P.T. If L and M are regular languages, then so is $\mathrm{L} \subset \mathrm{M}$.
2. Write a DFA to accept the intersection of $\mathrm{L} 1=(\mathrm{a}+\mathrm{b})^{*} \mathrm{a}$ and $\mathrm{L} 2=(\mathrm{a}+\mathrm{b})^{*} \mathrm{~b}$ that is for $\mathrm{L} 1{ }^{\wedge} \mathrm{L} 2$.
3. Find the DFA to accept the intersection of $L 1=(a+b) * a b(a+b) *$ and $L 2=(a+b) * b a(a+b) *$ and that is for $\mathrm{L} 1^{\wedge} \mathrm{L} 2$
4. P.T. If $L$ and $M$ are regular languages, then so is $L-M$.
5. Design context-free grammar for the following cases $\mathrm{L}=\{0 \mathrm{n} 1 \mathrm{n} \mid \mathrm{n} \geq 1\}$
$\mathrm{L}=\{$ aibjck $\mid \mathrm{i} \neq \mathrm{j}$ or $\mathrm{j} \neq \mathrm{k}\}$
6. Generate grammar for RE $0 * 1(0+1) *$
7. P.T. If $L$ is a regular language over alphabet $S$, then $L=6^{*}-L$ is also a regular language.
8. Explain CGF with an example.
9. Explain decision properties of regular language.

## Module 4

## Context Free and Non Context Free Languages

1. Eliminate the $\mathrm{n}->\mathrm{n}$-generating symb->ls fr->m $\mathrm{S}->\mathrm{aS}|\mathrm{A}| \mathrm{C}, \mathrm{A}->\mathrm{a}, \mathrm{B}->\mathrm{aa}, \mathrm{C}->\mathrm{aCb}$.
2. Draw the dependency graph as given above. $A$ is non-reachable from $S$. After eliminating A, G1 $=(\{S\},\{a\},\{S->a\}, S)$.
3. Find out the grammar without H - Productions $\mathrm{G}=(\{\mathrm{S}, \mathrm{A}, \mathrm{B}, \mathrm{D}\},\{\mathrm{a}\},\{\mathrm{S}$ o aS $\mid \mathrm{AB}, \mathrm{A}$ -> H, B-> H, D ->b\}, S).
4. Eliminate $n->n$-reachable symbols from $G=(\{S, A\},\{a\},\{S->a, A->a\}, S)$
5. Eliminate non-reachable symbols from $S$-> aS $\mid \mathrm{A}, \mathrm{A}->\mathrm{a}, \mathrm{B}->\mathrm{aa}$.
6. Give leftmost and rightmost derivations of the following strings
a) 00101
b) 1001
c) 00011
7. Construct DPDA which accepts the language $L=\left\{w^{\mathrm{w} w} \mathrm{R}^{\mathrm{R}} \mid \mathrm{w}\{\mathrm{a}, \mathrm{b}\}^{*}, \mathrm{c} \Sigma\right\}$.

## Module 5 Turing Machine

1. Explain with example problems that Computers cannot solve.
2. Explain briefly the following Halting problem.
3. Explain Programming techniques for Turning Machines
4. Design a Turing machine to accept a Palindrome.
5. Design a TM to recognize a string of the form $a^{n} b^{2 n}$.
